

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method for providing page description language (“PDL”) encapsulated image data from an imaging device that includes a scanner, the method comprising:
scanning an image using the scanner to produce scanned image data as part of a scan job;
obtaining document formatting inputs for the scan job from a user interface, the document formatting inputs being configurable at the user interface, and wherein the document formatting inputs comprise copy function options usable with the scan job, the copy function options controlling the page orientation, page margins, and page size of the scan job;
encapsulating the scanned image data in a page description language using the document formatting inputs for document formatting, wherein the encapsulating occurs at the imaging device, and wherein the formatting inputs control how the scanned image data is framed into a document defined by the page description language; and
transmitting the page description language to a computing device from the imaging device, wherein the page description language that is transmitted indicates the page size, the page margins, and the page orientation of the scanned image data.
2. (Original) The method of claim 1, wherein the document formatting inputs are obtained from a control panel on the imaging device.
3. (Original) The method of claim 1, wherein the document formatting inputs are obtained from a local user interface.

4. (Original) The method of claim 1, wherein the document formatting inputs are obtained from a remote user interface.
5. (Canceled)
6. (Original) The method of claim 1, wherein the imaging device is a multi-function peripheral.
7. (Currently Amended) The method of claim 1, wherein the document formatting inputs comprise ~~a page size input~~, a scale input, a placement input, a pagination input, a number of images per page input, a page order input, a document style input, a post collation operations input, and a page delimitation input, ~~an orientation input and a margins input~~.
8. (Original) The method of claim 1, wherein the imaging device comprises a multi-function peripheral, wherein the document formatting inputs are obtained from a control panel on the multi-function peripheral and wherein the control panel is also used for a user input for a copy function of the multi-function peripheral.
9. (Original) The method of claim 1, wherein the page description language is a language selected from the group consisting of a portable document format (PDF), postscript (PS), printer control language (PCL), HP GL/2, IBM IPDS, IBM SCS, Epson EscP and DDIF.
10. (Original) The method of claim 1, wherein the page description language comprises document wide properties, page delimitation properties, page properties and one or more drawing elements.

11. (Currently Amended) An imaging device that comprises a scanner, wherein the imaging device provides page description language ("PDL") encapsulated image data, the imaging device comprising:

- a processor for control of the imaging device;
- memory in electronic communication with the processor;
- a scanner in electronic communication with the processor;
- a control panel for operation of the imaging device by a user, wherein the control panel is in electronic communication with the processor for receiving user inputs; and

executable instructions executable by the processor, wherein the instructions are executable to:

- scan an image using the scanner to produce scanned image data as part of a scan job;
- obtain document formatting inputs for the scan job from the control panel, the document formatting inputs being configurable at the control panel, and wherein the document formatting inputs comprise copy function options usable with the scan job, the copy function options controlling the page orientation, page margins, and page size of the scan job; and
- encapsulate the scanned image data in a page description language using the document formatting inputs for document formatting, wherein the encapsulating occurs at the imaging device, and wherein the formatting inputs control how the scanned image data is framed into a document defined by the page description language, wherein the page description language indicates the page size, the page margins, and the page orientation of the scanned image data.

12. (Canceled)

13. (Currently Amended) The imaging device of claim 11, wherein the document formatting inputs comprise ~~a page size input~~, a scale input, a placement input, a pagination input, a number of images per page input, a page order input, a document style input, a post collation operations input, and a page delimitation input, ~~an orientation input and a margins input~~.

14. (Original) The imaging device of claim 11, wherein the imaging device is a multi-function peripheral imaging device that further comprises a printer in electronic communication with the processor, and wherein the control panel is also used for a user input for a copy function of the multi-function peripheral imaging device.

15. (Original) The imaging device of claim 11, wherein the page description language is a language selected from the group consisting of a portable document format (PDF), postscript (PS), printer control language (PCL), HP GL/2, IBM IPDS, IBM SCS, Epson EscP and DDIF.

16. (Original) The imaging device of claim 11, wherein the page description language comprises document wide properties, page delimitation properties, page properties and one or more drawing elements.

17. (Currently Amended) A computer-readable medium for storing program data, wherein the program data comprises executable instructions ~~for implementing a method~~ in a computing device for providing page description language ("PDL") encapsulated image data from an imaging device that includes a scanner, the instructions being executable to:

obtain image data at an imaging device as part of a scan job;

obtain document formatting inputs for the scan job from a user interface, the document formatting inputs being configurable at the user interface, and wherein the document formatting inputs comprise copy function options usable with the scan job, the copy function options controlling the page orientation, page margins, and page size of the scan job;

encapsulate the scanned image data in a page description language using the document formatting inputs for document formatting, wherein the encapsulating occurs at the imaging device, and wherein the formatting inputs control how the scanned image data is framed into a document defined by the page description language; and
transmit the page description language to a computing device from the imaging device, wherein the page description language that is transmitted indicates the page size, the page margins, and the page orientation of the scanned image data.

18. (Original) The computer-readable medium of claim 17, wherein the image data is obtained from a scanner of the imaging device.

19. (Original) The computer-readable medium of claim 18, wherein the document formatting inputs are obtained from a control panel on the imaging device.

20. (Original) The computer-readable medium of claim 18, wherein the document formatting inputs are obtained from a local user interface.

21. (Original) The computer-readable medium of claim 18, wherein the document formatting inputs are obtained from a remote user interface.

22. (Canceled)

23. (Original) The computer-readable medium of claim 19, wherein the imaging device is a multi-function peripheral.

24. (Currently Amended) The computer-readable medium of claim 19, wherein the document formatting inputs comprise ~~a page size input~~, a scale input, a placement input, a pagination input, a number of images per page input, a page order input, a document style input, a post collation operations input, and a page delimitation input, ~~an orientation input and a margins input~~.

25. (Original) The computer-readable medium of claim 17, wherein the imaging device comprises a multi-function peripheral, wherein the document formatting inputs are obtained from a control panel on the multi-function peripheral and wherein the control panel is also used for a user input for a copy function of the multi-function peripheral.

26. (Original) The computer-readable medium of claim 17, wherein the page description language is a language selected from the group consisting of a portable document format (PDF), postscript (PS), printer control language (PCL), HP GL/2, IBM IPDS, IBM SCS, Epson EscP and DDIF.

27. (Original) The computer-readable medium of claim 17, wherein the page description language comprises document wide properties, page delimitation properties, page properties and one or more drawing elements.

Appl. No. 10/787,365
Amdt. dated May 21, 2010
Reply to Office Action of February 22, 2010

28. (Currently Amended) The method of claim 1, wherein page description language indicating the page size, the page margins, and the page orientation that is transmitted is identical to that which would have been obtained if the original operation was a copy job instead of a scan job.
